1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. David Doyle on 02-01-05.

The abstract has been corrected:

In a phase-locked loop (PLL) frequency synthesizer, a first frequency divider divides an output signal from a voltage-controlled oscillator by a first divider value. A second frequency divider divides a reference signal by a second divider value. A charge pump increases a voltage level on a loop filter by injecting a charge pump current and decreases the voltage level on the loop filter by draining the charge pump current. A loop response control circuit adjusts the charge pump current. In particular, the first divider value may lie within one of a first plurality of ranges and/or the second divider value may lie within one of a second plurality of ranges. The charge pump current is adjusted based at least partially on which of the first plurality of ranges the first divider value lies within and/or which of the second plurality of ranges the second divider value lies within.

In claim 36, line 3, "an UP" is now—the UP--; on line 5, "a DOWN" is now—the DOWN--.

On page 7 of the specification, line 3, " $k+1$ " is now— $J+1$ —.

2. The following is an examiner's statement of reasons for allowance: The examiner could not find fair suggestion for the plurality of divider ranges as claimed in addition to all else; this was discussed with applicant's representative in light of the prior art of record.
